The invention relates to 18 human peptidases designated HPEP-1 to HPEP-18, respectively. The peptidases can be used for treating a disease or condition associated with decreased expression or over expression of functional human peptidases. The diseases that can be diagnosed, prevented and treated include cell proliferative disorders (such as arteriosclerosis, psoriasis, myelofibrosis, and cancers), allergies, autoimmune/inflammacory disorders (such as AIDS, anaemia, allergies, Crohn's disease, asthma, atherosclerosis, Grave's disease, multiple sclerosis, and scleroderma), infections, and metabolic disorders (such a Addison's disease, diabetes; cystic fibrosis, glycogen storage diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of human prostatin precursor. The invention provides 9 novel SECP proteins (see AAB20155-63), nucleic acids encoding them (see AAF30188-96), antibodies, mutants or fragments. These can be used to detect, treat or prevent an SECP-associated disorder, to screen for predisposition to such a disorder, and to identify agents that modulate the expression or activity of SECP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and which does not appear to include a signal peptide. protein shows homology to human PRO351 protein, and to of human prostatin precursor. The invention provides
   Human; transmembrane serine protease 20; MTSP20; enzyme;
endotheliase; cytostatic; dermatological; cardiant; vulnerary;

```
protein (endotheliase) that is expressed in osophageal tumour tissues, in lung carcinoma, colon, cervix, leukaemia and other cell lines as well as in certain healthy cells and tissues. The level of MTSP20 can be diagnostic of prostate, uterine, lung, coesophagus or colon cancer, or leukaemia. The expression and/or activation of MTSP20 on, or in the vicinity of, a cell.or a bodily fluid can be a marker for breast, prostate, lung, colon and other cancers. The invention provides MTSP20 onlypeptides and other cancers. The invention provides MTSP20 polypeptides and primers, chain forms, the nucleic acids encoding them, probes and primers, chain forms, the nucleic acids encoding them, probes and primers, expression vectors, host cells, antibodies and transgenic animals. Nucleic acids encoding MTSP20 or its protease domain can be expressed in a host cell, and the protein used in assays to identify candidate compounds that modulate MTSP activity. A claimed method
                         haemophiliac joints, inflammatory bowel disease, nonhealing fractures, periodontitis, psoriasis, rheumatoid arthritis, venous stasis ulcers, granulations-burns, hypertrophic scars, liver cirrhosis, osteoradionecrosis, postoperative adhesions, pyogenic granuloma and systemic sclerosis) aberrant wound repairs, circulatory disorders (especially Raynaud's phenomenon) crest syndromes (especially calcinosis, oesophageal, dyomotiloty, sclerodactyly and telangiectasis), dermatological disorders (especially systemic vasculitis, scleroderma, pyoderma (especially systemic vasculitis, scleroderma, pyoderma grangrenosum, vasculopathy, venous, arterial ulcers, Sturge-Weber syndrome, Post-wine stains, blue rubber bleb naevus syndrome, and ocular disorders (especially blindness caused by ocular neovascular disease, corneal graft neovascularisation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of inhibiting tumour initiation, growth or progression or for treating a malignant or pre-malignant condition, especially of the breast, cervix, prostate, lung, overy or colon, involves administering an inhibitor of a MTSP20 polypeptide, especially an antisense oligonucleotide, double-stranded RNA or antibody (all claimed). These inhibitors are also used in a claimed method of treating or preventing a disease or disorder associated with undesired and/or uncontrolled angiogenesis or neovascularisation, especially undesired angiogenesis associated with solid neoplasms, vascular malformations and cardiovascular disorders (especially angiofibroma, angiolipoma, atherosclerosis, restenosis/reperfusion in the control of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                             .2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC disorders (osteoporosis), connective tissue disorders (arthritis), altoimmune disorders (systemic lupus erythematosus), wound healing, male creproductive system disorders (testicular cancer), digestion and food absorption disorders (Crobn's disease), neurodegenerative diseases (Crobn's disease), neurodegenerative diseases (Alzheimer's disease), behavioral disorders (Tourette's syndrome), CC proliferative and cancerous conditions (acute myelogenous leukaemia), CC cocular disorders (glaucoma) and infectious diseases caused by bacteria, CC viruses, fungi or parasites. It is also useful for screening therapeutic compounds. Serine proteases are used as immunological probes or CC compounds. Serine proteases are used as immunological probes or CC compounds in biological samples, identification of chromosomes, cells and CC tissues in biological samples, identification of male contraceptive CC agents, delivery of compositions to targetted cells expressing a CC receptor for serine protease nucleic acids are also useful in gene therapy. CC Note: The present sequence shown in page 282-283 of sequence listing has been assigned SEQ ID NO: 16. But the sequence, peptide fragment #14 CC related to human serine protease (AAY72117) shown in page 15 is also contact.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Si

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid molecules encoding human serine protease polypeptides, useful for diagnosis, prevention and/or treatment of disorders e.g. osteoporosis, lupus erythematosus and Alzheimer's -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HTTUK57 (ATCC Deposit No: PTA538).

The invention relates to human serine proteases and their cDNA clones
It is used in methods for the diagnosis, prevention and treatment of
various disorders related to serine protease such as bone formation
                      Amino acid sequence of a human
                                                       26-NOV-2001

                                                                                                                                          The present sequence represents a human secreted polypeptide. The secreted polypeptides and polymelectides are useful for treating nervous and muscular diseases, for inhibiting tumour formation and treatstasis, for treating gastrointestinal ulceration, for preventing and treating diseases in spinal cord, thyroid gland, ovary, prostate, renal gland, small intestine, heart, trachea, thymus, lymph node, muscular system and colon, for treating lipase deficiency in cystic fibrosis and pancreatitis, for treating undesirable clot formation so that require decreased blood clot formation, for treating procedures that require decreased blood clot formation, for treating limune disorders and microbial diseases, for treating immune disorders, for treating inflammation and transplant rejection, for enhancing bone thickness and increasing bone density, and for regulating vascular smooth cell proliferation. They

The present sequence represents a human secreted polypeptide. The secreted polypeptides and polymcleotides are useful for treating CC nervous and muscular diseases, for inhibiting tumour formation and CC metastasis, for treating gastrointestinal ulceration, for preventing CC and treating diseases in spinal cord, thyroid gland, ovary, prostate, CC muscular system and colon, for treating lipase deficiency in cystic CC fibrosis and pancreatitis, for treating undesirable clot formation CC such as mycardial infarction, during angioplasty and all surgical CC procedures that require decreased blood clot formation, for treating CC liver diseases, coagulation disorders and microbial diseases, for treating inflammation and transplant CC rejection, for enhancing bone thickness and increasing bone density, CC for reducing the loss of essential ferroxidases, for suppressing contraction and transplant contractions and for requilating vascular smooth cell proliferation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRODUCTS.

ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN ENZYME REGULATION: CONVERTED INTO PLASMIN BY PLASMINOGEN ACTIVATORS, BOTH PLASMINOCEN AND ITS ACTIVATOR BEING BOUND TO FIBRIN. CANNOT BE ACTIVATED WITH STREPTOKINASE.

MISCELLANBOUS: PLASMIN IS INACTIVATED BY ALPHA-2-ANTIPLASMIN IMMEDIATELY AFTER DISSOCIATION FROM THE CLOT.

MISCELLANBOUS: IN THE PRESENCE OF THE INHIBITOR, THE ACTIVATION INVOLVES ONLY CLEAVAGE AFTER ARG-581, RESULTING IN 2 CHAINS HELD TOGETHER BY 2 DISULFIDE BONDS. WITHOUT THE INHIBITOR, THE ACTIVATION INVOLVES ALSO REMOVAL OF THE ACTIVATION PERFIDE.

SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. PLASMINOGEN SUBFAMILY SIMILARITY: Contains 5 kringle domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: PLASMIN DISSOLVES THE FIBRIN OF BLOOD CLOTS AND ACTS A PROTEDLYTIC FACTOR IN A VARIETY OF OTHER PROCESSES INCLUDING EMBRYONIC DEVELOPMENT, TISSUE REMODELING, TUMOR INVASION, AND INFLAMMATION; IN OVULLATION IT WEAKENS THE WALLS OF THE GRAAFIAN FOLLICLE. IT ACTIVATES THE UROKINASE-TYPE PLASMINOGEN ACTIVATOR, COLLAGENASES AND SEVERAL COMPLEMENT ZYMOZENS, SUCH AS C1 AND C5. IT CLEAVES FIBRIN, FIBRONECTIN, THROMEOSPONDIN, AS C1 AND VON WILLEBRAND FACTOR.
FUNCTION: ANGIOSTATIN IS AN ANGIOGENESIS INHIBITOR THAT BLOCKS NEOVASCULARIZATION AND GROWTH OF EXPERIMENTAL PRIMARY AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mouse cDNA sequences."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  METASTATIC TUMORS IN VIVO.
CATALYTIC ACTIVITY: Preferential higher selectivity than trypsin.
